Statistics of Local Public School Systems, 1967. Fall 1967: Pupils/Schools/Staff 1966-67: Expenditures.

National Center for Educational Statistics (DHEW), Washington, D.C.

Pub Date Mar 69

Note-106p.

Available from-Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402 (No. FS 5.220:20112-67, $1.00)

EDRS Price MF-$0.50 HC Not Available from EDRS.

Descriptors-Elementary Schools, Expenditure Per Student, *Expenditures, *Instructional Staff, *National Surveys, *Public School Systems, Rural Schools, School Size, Secondary Schools, *Student Enrollment, Student Teacher Ratio, Suburban Schools, Teacher Aides, Teacher Background, Urban Schools

This report presents basic educational data from a representative sample of the operating public school systems in the United States. Its primary purpose is to provide quantitative information comparable from school system to school system, with summary and trend analyses of the data. The summary data are found in tables within the text and are analyzed in related discussion. Information on individual school systems is given in six basic data tables covering: (1) Number of schools in local public school systems by organizational level, grade-span, and size of school system; (2) enrollment and pupil-teacher ratio by organizational level and size of school system; (3) instructional staff by position and size of school system; (4) classroom teachers by highest level of education completed and by size of school system; (5) current expenditures by account and size of school system; (6) current expenditures per pupil in average daily membership by account and size of school system. Appendixes contain information on sample design and selection, definitions and limitations of the data, and a reproduction of the survey report form. (DE)

FOREWORD

With this report, the National Center for Educational Statistics (NCES) of the U.S. Office of Education resumes the collection and dissemination of general basic statistics on local public school systems.

Comprehensive data on city school systems were reported from 1871 to 1918 in the Annual Report of the Commissioner of Education and from the school year 1917-18 to the school year 1955-56 in the Biennial Survey of Education in the United States. In the last biennial report, coverage was expanded to include suburban, county-unit, and rural school systems. Also, a series of annual studies on current expenditures per pupil in city school systems was published from 1918 thru 1960.

The collection of general local school system data was suspended for several years as emphasis in data collection was put on the requirements of the legislative programs, especially the National Defense Education Act and the Elementary and Secondary Education Act. However, the need to examine local school systems in their entirety rather than solely in terms of the program segments, as well as demands by the educational community for basic data, necessitated a resumption of this type of general-purpose survey.

With the exception of the special reports of the 1955-56 survey mentioned above, all previous statistical reports on local school systems contained data on urban school systems only. This report, planned for annual release, includes a representative sample of all types of local school systems.

The report is based on data collected in the pilot study for the Elementary-Secondary General Information Survey (ELSEGIS) which was developed jointly by NCES and the Committee on Educational Data Systems (CEDS) of the Council of Chief State School Officers. Thanks are due the CEDS representatives and other research and statistical personnel in each State, who provided the required data from the pre-existing records of their State or collected the data from the constituent local school systems included in the survey sample.

INTRODUCTION

This report presents basic educational data from a representative sample of the operating local public school systems in the United States.[1] Its primary purpose is to provide the educational community--educational policy makers, administrators, and researchers--with quantitative information comparable from school system to school system and with summary and trend analyses of the data.

The summary data are found in the text tables and are analyzed in a related discussion. Quantitative information on individual school systems is given in the six basic data tables. Educational researchers and school officials should find these data useful not only for comparison purposes but also for making further analyses.

This survey represents the pilot effort of a new series of reports incorporating some of the features of the City School Systems chapter of the Biennial Survey of Education (last published for 1955-56),[2] and the Current Expenditures per Pupil in Public School Systems study (last published for 1959-60).[3] Additional items were added to meet current needs and interests.

The data for this report were collected in the Spring of 1968 in the pilot study of the Elementary-Secondary General Information Survey (ELSEGIS), a cooperative venture of the U.S. Office of Education and the Committee on Educational Data Systems (CEDS) of the Council of Chief State School Officers.

Office of Education staff, in consultation with a CEDS-ELSEGIS Advisory Committee, developed the survey instrument (see Appendix C). A scientific national sample was then designed (see Appendix A). Pre-addressed and coded forms for the local school systems included in the sample were mailed to research and statistics departments in each State education agency. States had the option either of providing the data from records already existing in their own files or of forwarding the report form to the local systems for completion. Most States were able to compile the entire reports from their own records, but some had to collect at least part of the data from the local school systems. States also had the option of transmitting the data to the U.S. Office of Education by sending either completed report forms or punched cards prepared in accordance with a standard format provided by the Office. Most States sent in the forms.

To assure maximum comparability, the items and their definitions were designed to generally agree with the categories and terminology of U.S. Office of Education Handbooks.[4] These standard terminology manuals were developed jointly by the U.S. Office of Education, the State education agencies, educational organizations, and a host of prominent educators, including local school officials.

" II - Financial Accounting for Local and State School Systems.
" IV - Staff Accounting for Local and State School Systems. OE-23039

The enrollment size of the school system was chosen as the major unit of analysis because experience with educational data has established that school systems of different sizes also tend to differ by other characteristics. Therefore, the survey sample was designed to assure adequate representation in each of six size groups.

A few analyses were also made on the basis of metropolitan status and region. The three metropolitan status categories are:

Metropolitan, central
Metropolitan, other
Nonmetropolitan

The metropolitan status categories agree, in general, with the criteria for "residence" established by the Bureau of the Census. A school system was defined as Metropolitan if it was located in a county defined as a Standard Metropolitan Statistical Area (SMSA) county. (In New England, SMSA's were determined on the basis of towns rather than counties.) If the school system was coterminous with or fell within the boundaries of a central city (the large city comprising the hub of the SMSA), it was classified as "Metropolitan, central"; if it fell within the SMSA but outside of the central city, it was classified as "Metropolitan, other." Some large county-unit school systems included both the central city and surrounding areas. In such cases, a 50-percent rule was applied. Where the population of the central city (1960 Census) was 50 percent or more of the county population, the county-unit system was regarded as "Metropolitan, central"; where the city population accounted for less than 50 percent, the system was categorized as "Metropolitan, other." As an illustration of this rule, the Mobile County, Alabama school system was included as "Metropolitan, central" because Mobile city made up 54 percent of the total county population, but the Dade County, Florida system was placed in the "Metropolitan, other" category because the central city of Miami accounted for only 31 percent of the total county population.

School systems located outside of SMSA's were classified as "nonmetropolitan."[5]

Selected data are also shown for the four regions of the United States. The States comprising each region are listed in alphabetical order as follows:

North Atlantic

Connecticut
Delaware
District of Columbia
Maine
Maryland
Massachusetts
New Hampshire
New Jersey
New York
Pennsylvania
Rhode Island
Vermont

Great Lakes and Plains

Illinois
Indiana
Iowa
Kansas
Michigan
Minnesota
Missouri
Nebraska
North Dakota
Ohio
South Dakota
Wisconsin

Southeast

Alabama
Arkansas
Florida
Georgia
Kentucky
Louisiana
Mississippi
North Carolina
South Carolina
Tennessee
Virginia
West Virginia

West and Southwest

Alaska
Arizona
California
Colorado
Hawaii
Idaho
Montana
Nevada
New Mexico
Oklahoma
Oregon
Texas
Utah
Washington
Wyoming

---

[5] In order to expedite this pilot effort, all systems with enrollments of less than 300 were automatically put into the nonmetropolitan group. Since the overall weight of this stratum is very small (1.7 percent of total enrollment), any bias resulting from this procedure would be minimal.

For the sake of consistency in tabulation, the summary data are presented to the nearest whole number. Because the data are estimates derived from a sample, they are subject to both sampling and nonsampling errors. As such, they must not be regarded as precise to the last digit. For definitions and limitations of the data, see Appendix B.

SCHOOL SYSTEMS, SCHOOLS, AND PUPILS

Number of School Systems and Enrollment

In the fall of 1967, 44,528,767 children were enrolled in 93,581 elementary and secondary schools administered by 20,173 operating local public school systems[6/] (Table A).

The local public school system or local basic administrative unit is defined as an administrative unit which exists primarily to operate public schools.[7/] There is great diversity in the size of the systems in the United States (Table B). The 706 school systems with enrollments of 10,000 or more--less than 4 percent of all systems--had nearly half the public school enrollment (46 percent), and the 172 school systems enrolling 25,000 or more pupils comprised less than 1 percent of all school systems but accounted for well over one-fourth of all enrollments (29 percent). At the other end of the scale, four-fifths of the school systems had enrollments of less than 2,500, but they accounted for only one-fifth of all enrollments. Over 40 percent of the systems had less than 300 pupils, but they included less than 2 percent of the total national enrollment.

About two-thirds of the pupils attended schools located in metropolitan areas--the large cities and their surrounding suburbs--and most of these attended schools outside of the central cities. The remaining third attended schools in nonmetropolitan areas. The distribution is as follows:

Metropolitan status	Enrollment	
	Number	Percent
Total U.S.	44,528,767	100.0
Metropolitan, central.......	11,641,690	26.1
Metropolitan, other.........	17,158,359	38.6
Nonmetropolitan.............	15,728,718	35.3

6/ The figures on total number of school systems and total enrollment will differ slightly from official fall figures published in the Fall 1967 Statistics of Public Schools (OE-20007-67), which are--total operating school systems-20,388; total enrollment - 43,886,805. All figures from the present survey are based on a sample; the totals are given primarily as points of reference to the detailed analysis.

7/ Nonoperating school systems, i.e., those systems which exist as legal entities and may levy taxes or contract for public school services, but which were not operating schools in Fall 1967, were excluded from the study.

Table A.--Summary statistics of schools and pupils in local public school systems, by enrollment size: United States, fall 1967

Characteristic	Total	Enrollment size of school system					
		25,000 or more	10,000 - 24,999	5,000 - 9,999	2,500 - 4,999	300 - 2,499	Under 300
Number of school systems	20,173	172	534	1,118	2,041	7,953	8,355
Number of schools by grade span, total	93,581	15,553	13,503	13,505	15,438	25,860	10,722
Elementary only, total	68,184	11,881	9,463	10,141	11,411	16,702	8,586
Nursery (N) or kindergarten (K) only	392	19	28	30	27	288	0
N-, K-, or 1-4	2,161	218	185	366	720	672	0
N-, K-, or 1-6	37,655	8,730	6,977	6,074	6,512	7,862	1,500
N-, K-, or 1-7	2,593	656	291	597	435	539	75
N-, K-, or 1-8	16,829	1,284	949	1,919	1,832	4,509	6,336
Grades 5-8	442	56	36	50	81	144	75
Other elementary [1]	8,112	918	997	1,105	1,804	2,688	600
Secondary only, total	22,920	3,542	2,760	2,803	3,466	8,438	1,911
Grades 7-8	1,648	129	152	203	474	540	150
Grades 7-9	4,916	1,594	1,103	830	621	693	75
Grades 7-12	4,511	259	294	340	528	2,565	525
Grades 8-12	792	113	83	125	108	288	75
Grades 9-12	7,440	567	476	694	1,069	3,623	1,011
Grades 10-12	3,008	723	528	476	585	621	75
Other secondary	605	157	124	135	81	108	0
Combined elementary and secondary	2,477	130	280	561	561	720	225
Number of pupils enrolled, total	44,528,767	12,696,327	7,733,598	7,529,723	7,019,199	8,807,443	742,477
Elementary, total	27,292,241	7,734,600	4,726,414	4,672,916	4,310,201	5,297,386	550,724
Nursery	30,012	17,278	3,627	5,033	884	3,190	0
Kindergarten	2,407,814	777,667	400,813	383,394	378,924	448,278	18,738
Other elementary	24,854,415	6,939,655	4,321,974	4,284,489	3,930,393	4,845,918	531,986
Secondary	17,236,526	4,961,727	3,007,184	2,856,807	2,708,998	3,510,057	191,753

---

[1] From partial data it is estimated that of the "Other elementary" schools, the most prevalent are N-, K-, or 1-5 (35 percent), N-, K-, or 1-3 (12 percent), and 6-8 (9 percent).

Table B.--Distribution of operating local public school systems and enrollments, by enrollment size: United States, fall 1967 1/

Enrollment size	School system		Enrollment	
	Number	Percent	Number	Percent
Total U.S.	20,173	100.0	44,528,767	100.0
25,000 or more	172	0.9	12,696,327	28.5
10,000 - 24,999	534	2.6	7,733,598	17.4
5,000 - 9,999	1,118	5.5	7,529,723	16.9
2,500 - 4,999	2,041	10.1	7,019,199	15.8
300 - 2,499	7,953	39.4	8,807,443	19.8
Under 300	8,355	41.4	742,477	1.7

1/ The data in this table will differ slightly from the figures in the comparable table of the Education Directory 1967-68, Part 2, Public School Systems, also published by the Office of Education, for the following reasons: a) for the Directory, an enrollment figure was obtained for every school system in the Nation. The figures in the present survey were derived from a sample of 1,195 school systems and are subject to sampling error. b) for the Directory, 12 States provided enrollment (or ADA, or ADM) for a time period earlier than fall 1967; virtually all of the figures in this survey are as of fall 1967.

Table C.--Percent distribution of local public school systems by organizational levels administered, for enrollment size groups: United States, fall 1967

Enrollment size	Number of school systems	Percent distribution by organizational levels administered		
		Elementary only	Secondary only	Both elementary and secondary
Total	20,173	36.3	3.5	60.2
300 or more, total	11,818	8.0	4.0	88.0
25,000 or more	172	0.0	1.2	98.8
10,000 - 24,999	534	5.1	2.8	92.1
5,000 - 9,999	1,118	7.2	2.7	90.1
2,500 - 4,999	2,041	4.4	1.3	94.3
300 - 2,499	7,953	9.5	5.1	85.4
Under 300	8,355	76.2	2.7	21.1

Enrollments were fairly evenly distributed among the four broad geographic regions of the country:

Region	Enrollment Number	Enrollment Percent
Total U.S.	44,528,767	100.0
North Atlantic............	10,552,026	23.7
Great Lakes and Plains.....	11,946,685	26.8
Southeast.................	10,355,383	23.3
West and Southwest.........	11,674,673	26.2

School Systems by Organizational Levels Administered

Approximately 60 percent of the local public school systems had both elementary and secondary school programs (Table C), 36 percent operated elementary schools only, and 4 percent had secondary schools only. These statistics varied considerably by size of school system. Among school systems enrolling 300 pupils or more, 88 percent provided both elementary and secondary schools, while elementary only and secondary only programs were operated by 8 and 4 percent of the systems, respectively. Among the very small systems (enrollment under 300), three-fourths operated only elementary programs. Only one out of five systems of this size operated combined elementary-secondary programs.

Number of Schools by Grade Span

In the fall of 1967, there were 93,581 public elementary and secondary schools in the United States. Of this total, 68,184 (73 percent) had elementary grades only, 22,920 (24 percent) had secondary grades only, and 2,477 (3 percent) had both elementary and secondary grades.

The distribution of all schools by grade span is as follows:

	Number	Percent		Number	Percent
Total schools	93,581	100.0	Secondary only	22,920	24.5
Elementary only	68,184	72.9	Grades 7 - 8	1,684	1.8
			Grades 7 - 9	4,916	5.3
Nursery (N) or			Grades 7 - 12	4,511	4.8
kindergarten (K)	392	0.4	Grades 8 - 12	792	0.8
N-, K-, or 1-4	2,161	2.3	Grades 9 - 12	7,440	8.0
N-, K-, or 1-6	37,655	40.2	Grades 10 - 12	3,008	3.2
N-, K-, or 1-7	2,593	2.8	Other secondary	605	0.6
N-, K-, or 1-8	16,829	18.0			
Grades 5-8	442	0.5	Combined elementary		
Other elementary	8,112	8.7	and secondary	2,447	2.6

Of the 68,184 schools offering elementary grades only, 37,655 schools (55 percent of all elementary schools) covered a span of grades beginning with nursery school, kindergarten, or grade 1 and ending with grade 6; and 16,829 schools (25 percent) began with nursery, kindergarten, or grade 1 and went through grade 8. Among the 22,920 schools with secondary grades only, the most prevalent grade spans were 9-12 (7,440 schools or 33 percent), 7-9 (4,916 schools or 21 percent), 7-12 (4,511 schools or 20 percent), and 10-12 (3,008 schools or 13 percent).

These statistics indicate that the traditional types of school system organizations still predominate, with most school systems organized on the basis of one of the following patterns:

a) The 8-4 system, which consists of 8-grade elementary schools and 4-year high schools.
b) The 6-3-3 system, which consists of 6-grade elementary schools, junior high schools, and senior high schools.
c) The 6-6 system, which consists of 6-grade elementary schools and combined junior-senior high schools.

There has been considerable discussion on the development of the middle or intermediate school--a separate school organization serving grades between the early elementary grades and the high school grades, e.g., a school covering grades 4-6 or 5-8. But the findings of this study show only about 2 percent of the schools falling into this category. (Among the schools for which specified grade spans were reported, 0.5 percent were reported as covering grades 5-8. From partial data it is estimated that out of the schools reported as "other elementary," an additional 1.5 percent could be classified as middle schools.)

Size of Schools

The average enrollment per school, irrespective of organizational level, was 476 pupils (Table D). Secondary schools, with an average enrollment of 752, were usually larger than elementary schools, where average enrollment size was 400.

Large school systems tended to have large schools and vice versa. In the systems with enrollments of 25,000 or more, the average enrollment per elementary school was 651 pupils; the average secondary school enrollment came to 1,401. As the total enrollment of the system decreased, the average size of the elementary and secondary schools also decreased. In systems with enrollments of less than 300, schools were especially small, averaging 64 pupils per elementary school and 100 pupils per secondary school.

Table D.--Average number of pupils per school by level and enrollment size of school system: United States, fall 1967

Enrollment size	All schools[1]	Elementary schools	Secondary schools
Total U.S.	476	400	752
25,000 and over	816	651	1,401
10,000 - 24,999	619	499	1,090
5,000 - 9,999	558	461	1,019
2,500 - 4,999	455	378	782
300 - 2,499	341	317	416
Under 300	69	64	100

1/ Includes combined elementary and secondary schools.

INSTRUCTIONAL STAFF

Number of Staff and Pupil-Staff Ratios

In the fall of 1967 an estimated 2,097,011 professional instructional staff (full-time equivalence) were employed by the local public school systems (Table E). This number included 1,848,842 classroom teachers, 89,957 principals and assistant principals, 22,009 supervisors of instruction, 35,856 librarians, 49,770 guidance and psychological personnel, 2,446 audiovisual staff, and 48,131 other professional staff members. To assist the classroom teachers, the school systems also employed an estimated 57,684 teacher aides and 96,848 other nonprofessional staff.

An index of the extent to which pupils receive the services of instructional staff is the number of staff per 10,000 pupils. This index is presented in Table F for specified instructional staff--by enrollment size, metropolitan status, and region. Some of the more significant observations are:

- The ratio of classroom teachers to pupils increased as the size of the school system decreased (See detailed discussion of pupil-teacher ratios below).
- The ratio of principals to pupils increased as the size of the system decreased; conversely the number of assistant principals per 10,000 pupils decreased as the enrollment size decreased. These patterns are consistent with those for school size (see page 7). Because the larger school systems generally have larger schools, they also have fewer schools relative to the pupil population than the smaller systems and consequently relatively fewer school heads or principals. On the other hand, the larger the school the greater the need for an assistant principal.
- Teacher aides tended to be employed in the large central cities of metropolitan areas. Much of the impetus for the use of these paraprofessionals came from federally supported programs under Title I of the Elementary and Secondary Education Act, which promoted experimentation in differential utilization of instructional staff. These programs are most prevalent in the central cities.

Average pupil-teacher ratios by level are shown by size group, metropolitan status, and region in Table G. The overall ratio was 24 pupils per teacher. The ratio of 27 for elementary schools was notably larger than the ratio of 21 for secondary schools, a pattern which remained consistent for all enrollment size, metropolitan status, and regional categories. However, pupil-teacher ratios at both the elementary and secondary school level were considerably smaller than average in the systems with enrollments of less than 300.

Distributions of pupil-teacher ratios are given in Table H. Data in this table show that among the systems with 2,500 pupils or more, well over 90 percent had pupil-teacher ratios in the relatively narrow range of 20-31. Greater dispersion was observed among the smaller systems.

Table E.--Summary statistics of instructional staff in local public school systems, by enrollment size: United States, fall 1967

Highest Level of Education Completed

The vast majority of the teachers (94 percent) had at least a bachelor's degree and one-fourth had a master's degree or higher (Table I). These percentages decreased consistently but slightly with each smaller enrollment size group over the first 5 groups, and dropped markedly for teachers in school systems with enrollments of less than 300. Thus, the percent of teachers with at least a bachelor's degree ranged from 97 percent in school systems with enrollments of 25,000 or more to 91 percent for school systems with enrollments of 300-2,499, and fell to 73 percent in the very small systems. Similarly, the percentage of teachers with a master's degree or better was also highest in the very largest school systems (28 percent), and decreased steadily as the size of the school system decreased. It went to 19 percent for the 300-2,499 enrollment size group, and down to 9 percent for the under 300 group.

Table H.--Percent distribution of local public school systems by pupil-teacher ratio, for enrollment size groups: United States, fall 1967

Pupil-Teacher Ratio	Total school systems	Enrollment size of school system					
		25,000 or more	10,000 - 24,999	5,000 - 9,999	2,500 - 4,999	300 - 2,499	Under 300

West and Southwest	484,604	1.6	70.8	27.4	0.2	98.4	27.6

Some variations were noted in the educational pattern of teachers in the different metropolitan status categories. In general, teachers in metropolitan areas had higher levels of educational attainment than teachers in nonmetropolitan areas. Within metropolitan areas, teachers in the central cities were somewhat better educated than teachers in the suburbs. Approximately 97 percent of the central city teachers and 96 percent of the suburban teachers had at least a bachelor's degree, and 30 and 27 percent, respectively, had a master's degree or better. Among teachers in nonmetropolitan areas, 91 percent had a bachelor's degree or higher and 19 percent had been granted at least a master's degree.

The educational patterns of teachers also differed somewhat among the four regions. The most notable deviations from the national pattern were the higher than average percentage of teachers with at least a bachelor's degree in the West and Southwest States (98 percent), the higher than average percentage of teachers with a master's degree or better in the North Atlantic and the West and Southwest regions (28 percent each), and the lower percentage of teachers with a master's degree in the Southeast region (18 percent).

CURRENT EXPENDITURES

Total Current Expenditures

In the school year 1966-67, total current expenditures of full-time public elementary and secondary day schools and for community services came to $22.5 billion[8] (Table J). Of this total, $22.0 billion (98 percent) went into the current expenditure accounts usually used in the determination of per-pupil costs--administration, instruction, attendance services, health services, pupil transportation, operation of plant, maintenance of plant, and fixed charges. Net expenditures for food services (gross expenditures less cafeteria sales) came to $284 million; net expenditures for student body activities (teams, clubs, etc.) amounted to $75 million. An additional $199 million was spent on such community services as recreation programs, parent-teacher associations and other civic activities, public libraries operated by school systems, welfare services, etc.

Of the $22.0 billion current expenditures allocated to pupil costs, three-fourths went for instruction. The percent distributions of these expenditures by account for enrollment size groups are shown in Table K. The exceptional expenditure patterns of the very small systems should be noted. On the average, systems with less than 300 children enrolled devoted a considerably smaller share of their total funds to instruction than the larger systems. Conversely, in these districts, proportionately more money was spent for two purposes, pupil transportation services (a necessary expense in the sparsely populated areas serviced by many of the smaller systems) and administration (an expense which could be reduced by school district reorganization).

8/ Two important qualifications must be made about this amount: a) it excludes expenditures for capital outlay, debt service, junior colleges, summer schools, and adult education; b) it covers only the expenditures of the local public school systems and thereby excludes those direct expenditures of the State education agency or of county and other intermediate agencies. Perhaps the most important example of such expenditures is State payments into teacher retirement funds which are sometimes made directly by the State education agency.

Current Expenditures Per Pupil in Average Daily Membership

Current expenditures per pupil in average daily membership (ADM) were $513 (mean) and $501 (median). Average expenditures were highest in the very largest and the very smallest school systems, but there was great variation within each enrollment size group (Table L).

In the not too distant past, the largest school systems were financially able to expend more for schools than the smaller school systems because of the wide tax base provided by the greater prevalence of commerce, industry, and wealth in the areas they served--usually large cities. But developments in recent years--population shifts in the cities involving influx of the poor and exodus of the more affluent, often accompanied by outflow of industry--have radically lowered the economic capability of the cities. Today, expenditures per pupil in the larger districts are still higher than average, but the factors most affecting these higher costs are special compensatory programs, usually federally supported, and comparatively higher staff salaries.

In the smaller school systems, the higher costs are usually attributable to the inefficiency of small school system operation--excessively low pupil-teacher ratios resulting in high per-pupil expenditures for instruction, and excessively high administrative costs and other overhead expenditures.

Trends in Current Expenditures Per Pupil

For 231 of the larger school systems, comparative data on current expenditures per pupil are available for both 1959-60[9] and 1966-67.

After adjusting the 1959-60 data for changes in the Consumer Price Index (CPI),[10] the two sets of data were compared for percent increase since 1959-60. The distribution is as follows:

Percent increase	Percent of school systems
231 selected school systems, total	100.0
Under 10.0	1.3
10.0 - 19.9	8.3
20.0 - 29.9	18.2
30.0 - 39.9	28.6
40.0 - 49.9	22.1
50.0 - 59.9	10.4
60.0 - 69.9	6.5
70.0 and over	4.5
Median percent increase 37.9	

Although this group of school systems is not representative of all school systems in the United States, it can be safely concluded that educational expenditures have risen at a rate well above that of the general cost of living as measured by the CPI. Only one of the 231 districts showed a decrease in trend-adjusted expenditures per pupil; all others exceeded the CPI trend. The median increase was approximately 38 percent.

---

[9] See Footnote 3, page 1 .

[10] Adjustments are based on the Consumer Price Index published by the Bureau of Labor Statistics, U.S. Department of Labor. For 1959-60 and for 1966-67, monthly index numbers were averaged on a July-to-June basis to correspond with the school year.

1/ INTENDED TO INCLUDE TEACHERS OF THE HOMEBOUND, RADIO AND TV INSTRUCTIONAL STAFF, AND SIMILAR PROFESSIONAL "INSTRUCTIONAL STAFF" NOT COVERED IN THE SPECIFIED CATEGORIES. HOWEVER, SOME SCHOOL SYSTEMS INCLUDED OTHER THAN INSTRUCTIONAL STAFF, E.G., ADMINISTRATIVE STAFF, HEALTH STAFF, ETC.

2/ INTENDED TO INCLUDE SECRETARIES AND CLERKS EMPLOYED BY THE SYSTEMS. SOME SYSTEMS APPARENTLY REPORTED SUCH PERSONNEL AS BUS DRIVERS, JANITORS, ETC.

3/ DATA ARE FOR SCHOOL YEAR 1966-67.

4/ DATA PARTIALLY ESTIMATED BY SCHOOL SYSTEM.

5/ KINDERGARTEN TEACHERS INCLUDED IN THE OTHER ELEMENTARY COLUMN.

6/ INCLUDES NURSERY TEACHERS ONLY; KINDERGARTEN TEACHERS ARE INCLUDED IN THE OTHER ELEMENTARY COLUMN.

7/ NOT REPORTED.

SAMPLE DESIGN AND SELECTION

Sample Design

The ELSEGIS sample was designed to meet the following criteria:

1. Provide highly reliable national estimates.
2. Provide reasonably reliable estimates for each of the size strata.
3. Include all school systems with enrollments of 25,000 or more.
4. Include a stratum covering school systems with enrollments of less than 300.
5. Limit the sample to approximately 1,200 school systems.

Expressing the requirements in practical terms, the variable "total enrollment," which was expected to be highly correlated with many other survey variables, was used as the critical measure. The number of sample school systems in any stratum was to be of sufficient size so that the relative error of the variable "total enrollment" for the stratum should not exceed 10 percent at the 95 percent confidence level.

After all the enrollment size-group constraints listed above were satisfied, the remaining sample units were allocated among the strata in accordance with optimum allocation techniques. The sampling ratios and other data pertinent to the sampling plan are shown in Table i. The sample was selected from the Office's universe of local public school systems updated in Fall 1967. The some 20,000 operating school systems in the universe were subdivided into the 6 strata. All systems of stratum 1 (25,000 enrollment or more) were included in the survey. For the remaining strata, a systematic random sample was chosen.

Estimates

Estimates were attained essentially by multiplying the reported figures by the inflation factor (the reciprocal of the sampling fraction), although the actual factors used reflected adjustments for nonresponse. For 29 school systems, the reported enrollment fell outside of the limits of the stratum from which the system was selected. Such systems were inflated in accordance with the original inflation factor, but listed and totaled in the correct stratum.

Sampling Error

Because the figures in this report are estimates derived from a sample, they are subject to sampling variability. Approximations of the standard error are given for estimated numbers (Table ii) and for estimated percentages (Table iii). The chances are about 2 out of 3 that the difference due to sampling variability between an estimate and the figure that would have been obtained from a complete canvass of all school systems, using the same survey forms and instructions, is less than the standard error. Similarly, the chances are about 19 out of 20 that the difference is less than twice the standard error and 99 out of 100 that it is less than 2½ times the standard error. Two illustrations of the use of these tables follow:

a. The national estimate of the number of schools offering elementary grades only is 68,184. This figure fell between the estimates of 50,000 and 100,000 shown in Table ii. Interpolation from the table shows an approximate standard error of 2,232. In applying the probabilities described above, the chances are about 2 out of 3 that the figure from a complete count would be 68,184 plus-or-minus 2,232, or between 65,952 and 70,416; about 19 out of 20 that it would be between 63,720 and 72,648; and about 99 out of 100 that it would fall within the range of 62,604 and 73,764.

b. The estimate of the percent of classroom teachers with less than a bachelor's degree in systems with less than 300 enrollment was 27.0 percent (Table I). The base figure--number of classroom teachers in systems with less than 300 enrollment--was 42,576. Using Table iii, an approximate standard error of 1.40 percent is obtained. This means that the chances are about 2 out of 3 that the percentage derived from a complete count will fall between 25.6 and 28.4 (27.0 plus or minus 1.40), etc.

The standard error does not reflect response biases or errors incurred in the data handling processes. However, concerted effort was made to minimize such errors through careful editing and follow-up procedures.

Educational researchers may wish to use the basic data tables to make analyses additional to those presented in this text. Since the school systems represent a statistical probability sample, national totals can be obtained by multiplying the data by appropriate inflation factors.

The standard inflation factors for the six strata are given in Table i. Because of stratum changes there are exceptions as follows:

School System	Stratum		Correct inflation factor
	in which listed	in which inflated	
Little Rock, Ark.	1	2	2.02

APPENDIX B

DEFINITIONS AND LIMITATIONS OF DATA

The data in this report are comparable from school system to school system to the extent that they are collected on a standard report-form based on standard definitions. However, despite the increasing use of the standard terminology handbooks, great variety in recording and accounting methods still prevails among the States and local school systems. To assure maximum comparability the reports were rigorously edited. Where discrepancies were detected, every effort was made to secure a revised, more compatible report. Serious discrepancies or gaps in the data are indicated by footnotes in the tables.

Some important definitions and limitations are given below for the basic data tables to which they specifically apply. The comments, of course, also pertain to the text tables derived from the basic data.

Table 1.--Number of schools in local public school systems by organizational level, grade span, and size of school system: Fall 1967--A school is defined as a division of the school system consisting of a group of pupils composed of one or more grade groups, organized as one unit with one or more teachers to give instruction of a defined type, and housed in a school plant of one or more buildings. More than one school may be housed in one school plant, as is the case when the elementary and secondary schools are housed in the same school plant. Schools which could not be separated into elementary or secondary organizations are included in the "combined elementary and secondary" column.

Table 2.--Enrollment and pupil-teacher ratio in local public school systems, by organizational level and size of school system: Fall 1967--The "enrollment" figures shown in the table represent the number of pupils on the active membership roster of the school system on or about October 1, 1967. The pupil-teacher ratios were obtained by dividing the enrollments by the number of classroom teachers given in Table 3. For both pupils and teachers, nursery and kindergarten data were added to "other elementary" figures in the computation of the pupil-teacher ratio for elementary schools.

Table 3.--Instructional staff in local public school systems, by position and size of school system: Fall 1967--The persons listed are the professional instructional staff directly involved in the instruction process (teachers, principals, supervisors of instruction, etc.) and their nonprofessional assistants (teacher aides, secretaries, clerks, etc.). Although every effort was made to exclude administrative, attendance, health, transportation, operation, and maintenance personnel, there is a possibility that persons other than instructional staff were sometimes reported as "other" professional or nonprofessional instructional staff. Thus, for example, for some school systems, persons employed in the office of the superintendent of schools, regarded as administrative staff, or school nurses, classified as health staff, may erroneously be reported in the "other professional" column. Similarly, bus drivers, janitors, etc. may have been wrongly included in the "other" column under nonprofessional.

The entries are in terms of full-time equivalence, e.g., a teacher working half-days is counted as .5. The respondent was asked to count full-time equivalence in tenths but to report the number of persons per position to the nearest whole number. Therefore, a zero entry in a column does not necessarily mean that there was no one working in that category; only that the full-time equivalence was less than .5. This becomes particularly significant in the very small school systems where, as a case in point, a head teacher may devote a fraction of his time to duties as principal. If this fraction is less than .5, the entry in the principal column will be 0.

Table 4.--Classroom teachers by highest level of education completed and size of school system: Fall 1967--School systems were asked to report highest level of education completed for both full-time and part-time classroom teachers. There is some indication of deviation from this pattern. For example, some school systems apparently reported in full-time equivalence; others seemingly included other instructional staff in addition to classroom teachers.

The figures reflect the highest degree actually granted. A teacher who has completed all course work toward a master's degree but has not finished other requirements, for example a thesis, is included in the "Bachelor's degree" column.

Table 5.--Current expenditures for local public school systems by account and size of school system: 1966-67--Expenditures in the specified accounts are for full-time elementary and secondary day schools only. Expenditures for junior colleges, summer schools, and adult education are excluded.

The figures were reported in thousands of dollars. A blank in a column, therefore, does not necessarily mean that there were no expenditures for that account. It may mean, rather, that expenditures were less than $500.

Table 6.--Current expenditures per pupil in average daily membership, for local public school systems, by account and size of school system: 1966-67--The data in this table represent the expenditures for the accounts allocated to pupil costs shown in Table 5, divided by average daily membership (ADM). ADM is defined as the annual aggregated days attendance plus annual days absence divided by the actual number of days taught.

For the reasons cited below, direct comparisons of individual school systems should be made with great caution:

1. The data were collected for general research purposes only. Both the State education agencies and the local school systems were urged to provide reasonable estimates where precise data were not available.

2. Basic statistics frequently do not tell the whole story. There are instances in which a school system will compare unfavorably with another in terms of statistical indicators when it is actually a superior system. For example, school system A may have a notably higher pupil-teacher ratio than school system B. Without further investigation it may appear that system B is better staffed. Yet, a close look at the two systems may show that system A has a well planned and coordinated program of large-group lectures and smaller regular classes, while system B only uses the traditional classroom system. As another example, school system X makes considerably higher expenditures per pupil than system Y. On the surface, system X is devoting more resources to education. Further investigation may indicate, however, that the high costs are due to the fact that system X is an inefficiently operating system spending too much on administrative overhead and that system Y is actually providing more school services.

For these reasons the data in the basic tables should be taken only as points of departure for further investigation into causes of the differences, rather than as conclusive evidence regarding quality of program or efficiency of management and administration.

INTRODUCTION

This report on local public school systems will be used as a pilot study for a general information survey at the elementary-secondary level. The study is being developed by the Office of Education with the advice and endorsement of the Committee on Educational Data Systems (CEDS) of the Council of Chief State School Officers.

An important mission of the Office of Education is the collection and dissemination of basic educational data in order to:

a. Provide the U.S. Commissioner of Education with information needed for planning, policy-making, and program administration.

b. Give the Congress information it requires relative to legislation.

c. Serve as a clearinghouse for educational information. That is, to provide the educational community--educational policy-makers, administrators, and researchers--with quantitative information comparable from State to State and school system to school system.

Your cooperation in this important project will be very much appreciated. In completing the form, please follow the enclosed instructions carefully.

The Office of Education will appreciate receiving any comments you have on the content of this form or on the future development of the Elementary-Secondary General Information Survey.
